

Freelancer UX/UI Design (w/m/d)

starting ASAP, approx. 2-weeks full-time

What are we doing?

We are a tech company based in Munich, dedicated to revolutionizing the way people experience and connect with their surroundings. Our mission is to bring cultural audio content to car drivers, tailored specifically to their interests and live location. Thus, we are making every car trip an immersive and enlightening audio experience. We are building on newly emerging automotive app stores leveraging the power of artificial intelligence. In the beginning of next year, we are extensively expanding our content portfolio to cover all of Germany with exciting audio stories.

How can you help?

We launched our first mobile app a few months ago to test the service with users and get feedback for the further development of the product. To move from prototype to product, we need fast UX/UI support. To enable our tech team to continue developing the product from mid-January onwards, a short-term full-time position starting **January 2, 2024** would be great. Here are some exemplary tasks:

- Rethinking the structure and onboarding of the app - how can it be even more intuitive?
- Improve the menu structure and possibly adapt it for iOS and Android
- Improving some of the existing screens
- Design for new functionalities (e.g. screen for audio you have already listened to)

We work in **Figma** and have already designed all of the app's existing screens ourselves.

What skills are we looking for?

- creative approach to make a completely new product understandable
- we are not looking for perfection, but a good & intuitive design in the short time frame
- it is important that our tech team can continue working directly with the screens
- good communication (German or English)
- independent work

We are happy if this project fits your profile & look forward to meeting you!

Please attach your CV to a motivational mail to career@locco.app.
